420 Blend

Planting Mix

Superior Soil Supplements' custom planting mix is recommended for all your container and raised bed(s). The **420 Blend** is Eco friendly, made with all natural organic bark and soil amendment products. The blend is great for retaining moisture and getting seeds, and new plantings off to a strong start.

Superior Soil's **420 Blend** is a high-grade formulation of virgin aged fir bark fines, peat moss, pumice, organic gypsum, dry humate and a small amount of washed river sand. This product is ideal for indoor or outdoor production and won't burn the most delicate transplants.

Ingredients

- **Aged Fir Bark** forms the base of this mix, as it is a stabilized pH neutral source or organic matter.
- **Canadian Sphagnum Peat Moss** is added to maintain aeration in the soil, and to improve water holding capacity.
- **Pumice** rock adds long lasting porosity.
- **Black Earth Organic Humate**, mined from high-grade deposits in Canada is added as a source of carbon, which helps to nourish plantings and create a healthier soil complex.
- **Empire Mining Company Organic Cal-CM**, mined from high purity deposits in Nevada, is added to help mitigate salts in irrigation water, and to add supplemental Calcium to help ensure strong plant cell walls.
- **Washed River Sand**, assist in stabilizing the mix preventing it from shirking away from the edges of the pot or container, and aiding in evenly distributing water without the root zone.
